

Quick and comfortable

Having a SPECTRALIS Eye Health Check has never been easier – there is normally no need for bright flashes or dilating eye drops – and with your results available instantly, you'll have total peace of mind in moments.

The scan only takes a few seconds and you can blink normally. The camera will not touch your eye so you will feel no discomfort.

If your eye care professional has not dilated your pupil to conduct the eye health check or for another examination, you can drive as usual.

Book today

For the ultimate clarity in your eye health, book your SPECTRALIS Eye Health Check today.

Your local optometrist

GO BEYOND WITH SPECTRALIS

Precision eye care. Beyond this world.

GO BEYOND WITH SPECTRALIS

Precision eye care. Beyond this world.

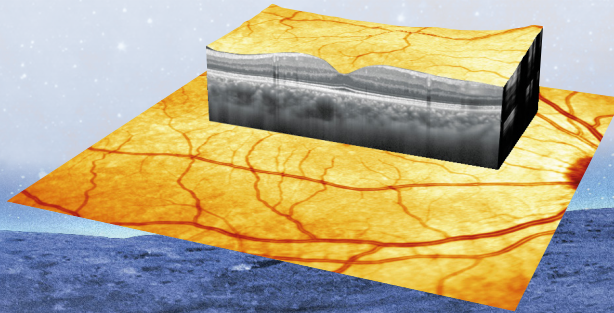

Peace of mind in moments

Achieve total confidence in your eye health with SPECTRALIS – the ultra-precision retinal scanner, designed to allow your optometrist to detect the tiniest changes, faster. Using cutting-edge technology, SPECTRALIS locks onto your unique retinal signature to allow accurate, on-going monitoring of your eye health at every visit.

SPECTRALIS is used on the International Space Station to monitor the health of astronaut's eyes and your optometrist has invested in the same technology so that you can get peace of mind about your eye health here on earth.

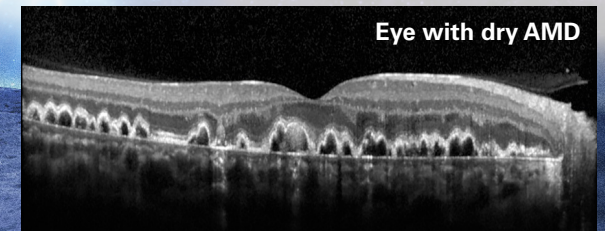

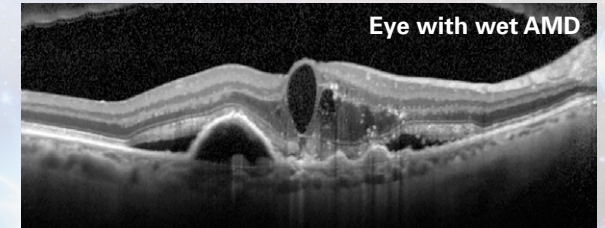

Exquisite detail

The SPECTRALIS uses Optical Coherence Tomography (OCT) to scan your eyes. OCT is a medical imaging technique that uses light waves to generate images of the back of your eye. It allows your optometrist to see a detailed three-dimensional view of your retina so that they can look at your eye in very fine detail.

We see the smallest change

SPECTRALIS can be used to detect a wide range of eye conditions and is ideal for the management and maintenance of pre-existing eye conditions, such as glaucoma and age-related macular degeneration (AMD).

One in two cases of sight loss can be avoided through early detection and receiving the right treatment at the right time.

Perfect vision doesn't mean healthy eyes. The key to avoiding sight loss is to visit your optometrist regularly for a comprehensive eye examination. With SPECTRALIS, your optometrist will go beyond a standard sight test to check your eyes in fine detail. We will keep a record of all of your check-ups and be able to compare past scans of your eye with current ones to look for changes which might affect your vision.

A SPECTRALIS Eye Health Check offers you the comfort that comes with knowing that your eyes are healthy or that your optometrist will see the smallest change before you do.
