### EYE HEALTH CHECK

Tru Track

It's easy to forget about your eye health when you have perfect vision. But you could be completely unaware that you have a sight threatening eye disease. One in two cases of sight loss can be avoided through early detection and the right treatment at the right time. We can provide the peace of mind that comes with knowing that your eyes are healthy or that we see the smallest change before you do. Only by having the most advanced diagnostic equipment can we provide early detection,

monitoring and treatment of eye disease such as glaucoma, macular degeneration and diabetes. We have invested in a SPECTRALIS 4D eye scanner, which is equivalent to a CAT scan for the eyes. It is the instrument of choice for retinal specialists within the NHS. Unlike retinal colour photographs and other 3-D eye scanners available, SPECTRALIS adds the fourth dimension, allowing us to monitor change over time to 1/1000 of a millimetre in exactly the same place at every visit.

Will you be the one?

One in two cases of serious sight loss is caused by AMD

Age Related Macular Degeneration (AMD) is hereditary and can rob you of your central sight. Once this is affected simple activities like driving, watching TV and even recognising faces becomes impossible. With the SPECTRALIS 4D HD eye health check we see the smallest change before you do and that changes everything. Earlier detection of AMD allows for earlier treatment and a better outcome for you. Protect your future, book your eye health check today.

One in two patients with glaucoma don't know they have the disease

Glaucoma is a hereditary disease. Very cleverly your brain compensates for the blind spots in your vision by filling in the gaps. Unfortunately, this results in either 'seeing things' that are not really there or missing the things that are. With the SPECTRALIS 4D HD eye health check we see the smallest change before you do and that changes everything. Earlier detection of glaucoma allows for earlier treatment and a better outcome for you. Protect your future, book your eye health check today.

**One in two patients with diabetes are unaware they have the disease**

Diabetes is a hereditary disease that can cause sight loss. Early detection and treatment can reduce the chance of sight loss for 9 out of 10 patients with diabetic retinopathy. With the SPECTRALIS 4D HD eye health check we see the smallest change before you do and that changes everything. Protect your future, book your eye health check today.

**One in two, sixty year olds have some form of cataract**

350,000 cataract procedures are carried out each year in the UK with fantastic results. To get the best outcome from cataract surgery, it's important to have a full retinal examination prior to treatment. With the SPECTRALIS 4D HD eye health check we see the smallest change before you do and that changes everything. Seeing behind the cataract allows for better treatment planning and a better outcome for you. Protect your future, book your eye health check today.

We can see the smallest change . . .  
and that changes everything
